

## Dunn Industries Manufacturing Expansion

Brookstone Builders, Inc. was hired to complete a manufacturing

expansion project by Dunn Industries, Inc. in Manchester, New Hampshire.

Dunn Industries has been manufacturing accurate, high tolerance tubing for the medical industry and other exacting markets since 1987. They have built a reputation for being a leader in the research and custom development of thermo-plastic micro tubing.

The scope of work involved the construction of a 5,800 square-foot one-story addition to Dunn's facility at 123 Abby Road in Manchester. In addition to traditional building, masonry, electrical, mechanical and site work, some specialty skills were also involved, which specifically were related to the expansion of an existing quality control area and an upgrade of the facility's fire protection system.

The masonry and structural steel-framed addition is primarily being used to provide additional manufacturing capacity, but also includes added office space and supplementary receiving and storage areas.

**Allen H. Yeaton**, PA of Manchester was the architect for this project.
